

# Daylight

*by* Bobbi Lurie

perceive it everywhere  
all comes out of it  
all is made of it

through the mind: light  
through the heart: love

existence is its own definition

Pythagoras: number 3

1. God
2. Logos
3. Beginning: creation

belief in duality holds ego together

becoming a complete human being  
an organ through which  
universe can experience itself fully

complete human being  
the way the universe experiences itself  
completely

make the eye  
completely  
transparent

give the world

an experience of  
dimensionality  
variety  
colorflavor  
like the whole universe is behind you and you are  
like a window through which it sees

not to free ourselves  
from suffering  
but become the window  
through which it sees
