

Daylight

by Bobbi Lurie

perceive it everywhere
all comes out of it
all is made of it

through the mind: light
through the heart: love

existence is its own definition

Pythagoras: number 3

1. God
2. Logos
3. Beginning: creation

belief in duality holds ego together

becoming a complete human being
an organ through which
universe can experience itself fully

complete human being
the way the universe experiences itself
completely

make the eye
completely
transparent

give the world

an experience of
dimensionality
valety
colorflavor
like the whole universe is behind you and you are
like a window through which it sees

not to free ourselves
from suffering
but become the window
through which it sees
