What the Dark Matter Says

by Gary Hardaway

Each observer is the universe of its observations. That's all there is for us and it is sad that conjunctions are illusory.

There can be no convergence. There is only the talking that talks about an angle of sight nothing else can share.

We talk on anyway. It's all that we can do and will never be enough to unify the wave and the particle

in one instance of is. We are mad for definition but incapable of anything like

the stillness definition requires, the absolute zero wherein nothing moves and therefore nothing is.
